First, divide monthly electric usage (1000 kWh) by peak sun hours (120), resulting in 8.333 kW. Converting this to watts (multiplied by 1000) gives 8333 watts. Finally, divide by the power rating of the chosen panel (400W), yielding approximately 20.83 panels. This suggests that 21 panels are needed for a 1000 kWh supply.
