

Why was the energy storage roadmap updated in 2022?

The Energy Storage Roadmap was reviewed and updated in 2022 to refine the envisioned future states and provide more comprehensive assessments and descriptions of the progress needed (i.e., gaps) to achieve the desired 2025 vision.

Will grid-scale battery storage grow in 2022?

Grid-scale battery storage in particular needs to grow significantly. In the Net Zero Scenario, installed grid-scale battery storage capacity expands 35-fold between 2022 and 2030 to nearly 970 GW. Around 170GW of capacity is added in 2030 alone, up from 11GW in 2022.

How many GW of battery storage capacity are there in 2022?

Batteries are typically employed for sub-hourly, hourly and daily balancing. Total installed grid-scale battery storage capacity stood at close to 28GW at the end of 2022, most of which was added over the course of the previous 6 years. Compared with 2021, installations rose by more than 75% in 2022, as around 11GW of storage capacity was added.

Will battery energy storage investment hit a record high in 2023?

After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD35 billion in 2023, based on the existing pipeline of projects and new capacity targets set by governments.

Is India ready for battery energy storage in 2022?

The Inflation Reduction Act, passed in August 2022, includes an investment tax credit for stand-alone storage, promising to further boost deployments in the future. In its draft national electricity plan, released in September 2022, India has included ambitious targets for the development of battery energy storage.
