

Is ATS a sustainable solution?

It is a sustainable(99% circular) and cost-effective solution that produces electricity directly from waste heat. For 200 years we've used turbines. ATS' solid-state solution represents a paradigm shift in how heat can be managed. The impact potential is gigatonnes, spanning industries and the world.

What is ATS' solid-state solution?

ATS' solid-state solution represents a paradigm shift in how heat can be managed. The impact potential is gigatonnes, spanning industries and the world. We are radically redefining what's possible to fix the climate. On average, 60% of the energy to power the world's industrial plants (cement, steel, chemicals) is lost as waste heat.

Why do we need an ATS cartridge?

Industry and the world needs a solution to this problem to save costs and the climate. The ATS Cartridge produces electricity directly from heat with no moving parts. The old technology utilizes highly complex turbines and hazardous chemicals. From 150 - 500+°C and radiant/exothermic heat

Advanced Thermovoltaic Systems (ATS) has developed a straightforward, safe, and scalable technology to capture waste heat and convert it into electricity, providing a transformative solution for heavy industries such as cement and steel production. These industries operate at extremely high temperatures, producing significant amounts of waste ...

One of the 20 winners was the Advanced Thermovoltaic Systems (ATS) team, including Jake Perez, a RASEI alum. The ATS team was awarded the distinguished 2024 Earthshot "Fix Our Climate" prize for their transformative efforts against climate change. Chosen from 5,342 nominations across 141 countries, this prestigious award was recently ...

Advanced Thermovoltaics Systems, turning Industrial Waste Heat directly into Sustainable Electricity. Lower operating costs while reducing your carbon footprint. [ats.energy](#). [top of page](#). [Home](#). [Media](#). [Press](#). [Team](#). [Contact](#). [More ...](#) ©2024 by Advanced Thermovoltaic Systems Corp.

Initially investigating advanced materials the company could use for solar panels, the Advanced Thermovoltaic Systems (ATS) team realised that its panels could generate electricity without light, only requiring waste ambient heat. The innovative technology captures this waste thermal energy, generated in abundance during various industrial ...

Holcim Ltd (Alpena, MI): Holcim will serve as a host site to validate a thermoelectric generator for waste heat reclamation from Advanced Thermovoltaic Systems, LLC (ATS). The ATS system aims to use its modular

heat-to-power technology to recover and convert previously lost and untapped low temperature waste heat.

Advanced Thermovoltaic Systems | 432 followers on LinkedIn. We harness our planet's most important and undervalued asset, waste heat energy, to create something Simply Powerful. | Single use heat is our planet's most important undervalued asset. We pioneered breakthrough all temperature heat to power at megawatt scale. Our patented, disruptive, heat to value solution ...

Fix Our Climate: Advanced Thermovoltaic Systems (ATS), USA Nominated by Herbert Smith Freehills LLP, ATS was recognized for its innovative technology that converts waste heat into electricity, addressing a significant source of energy loss in heavy industries. Industries such as cement and steel manufacturing produce vast amounts of waste heat ...

Canadian-based Advanced Thermovoltaic Systems (ATS) was recognised for its technology to capture and convert industrial waste heat into sustainable electricity without the need for moving parts. It won the "Fix Our Climate" Prize at this year's Earthshot Awards Ceremony, held last week in Cape Town, South Africa.

WINNER: Advanced Thermovoltaic Systems (ATS) Around 60% of the energy used to power industries is lost as waste heat. Led by CEO Kelly Adams, US-based ATS has developed a scalable technology to capture ...

"At ATS, we are proud to lead the way in converting this waste into clean, usable electricity. Winning the 2024 Earthshot Prize underscores the transformative potential of our technology. Tonight is a key moment for us as we focus on scaling up production in larger manufacturing facilities." - Kelly Adams, CEO, Advanced Thermovoltaic Systems.

Presently, turbines are one of the industries interested in ATS's work. For example wind turbines and aircrafts using gas turbines engines creating huge amounts of heat, currently massive axial fans are used to cool down these systems but being particularly large and complex with lots of infrastructure required to surround them, and the advanced skillsets ...

ATS is the world's first and only solution for industrial waste heat--without a single moving part. It is a sustainable (99% circular) and cost-effective solution that produces electricity directly from waste heat.

WINNER: Advanced Thermovoltaic Systems (ATS) Around 60% of the energy used to power industries is lost as waste heat. Led by CEO Kelly Adams, US-based ATS has developed a scalable technology to capture waste heat from industry and turn it into electricity for the hard-to-abate sectors, such as cement and steel production.

Advanced Thermovoltaic Systems (ATS) integrates cutting-edge security measures into our modular solid-state systems. From robust controls design to cyber security certification, tamper monitoring ...

Build a Waste-Free World: Keep IT Cool, Kenya, and Advanced Thermovoltaic Systems (ATS), USA. Fix Our Climate: Advanced Thermovoltaic Systems, USA. Commenting on the announcement, Prince William, Founder and President of The Earthshot Prize, said: "Today, we celebrate the incredible achievements of our 2024 Earthshot Prize Winners and Finalists.

Advanced Thermovoltaic Systems (<https://apo-opa /48EySP6>), USA Nominated by: Herbert Smith Freehills LLP. Advanced Thermovoltaic Systems (ATS) has developed a simple, safe and scalable technology to capture waste heat and convert it into electricity, offering a game-changing solution for heavy industries like cement and steel ...
