

# Air-cooled portable energy storage power supply

Are portable energy storage units sustainable?

Achieving the global electricity demand and meeting the United Nations sustainable development target on reliable and sustainable energy supply by 2050 are crucial. Portable energy storage (PES) units, powered by solid-state battery cells, can offer a sustainable and cost-effective solution for regions with limited power-grid access.

Why is portable energy storage important?

Conventional methods of providing electricity, such as portable fossil fuel engines, pose significant challenges including CO<sub>2</sub> emissions, noise pollution, limited fuel availability, and high costs [1]. To address these issues, there has been a growing focus on portable energy storage (PES) units that employ various storage technologies [2].

What is a standalone liquid air energy storage system?

4.1. Standalone liquid air energy storage In the standalone LAES system, the input is only the excess electricity, whereas the output can be the supplied electricity along with the heating or cooling output.

What is liquid air energy storage?

Concluding remarks Liquid air energy storage (LAES) is becoming an attractive thermo-mechanical storage solution for decarbonization, with the advantages of no geological constraints, long lifetime (30-40 years), high energy density (120-200 kWh/m<sup>3</sup>), environment-friendly and flexible layout.

What is hybrid air energy storage (LAES)?

Hybrid LAES has compelling thermoeconomic benefits with extra cold/heat contribution. Liquid air energy storage (LAES) can offer a scalable solution for power management, with significant potential for decarbonizing electricity systems through integration with renewables.

Which two-dimensional materials are used in energy storage devices?

Two-dimensional materials such as layered transition-metal dichalcogenides, carbides, nitrides, oxides and graphene-based materials have enabled very thin active electrodes with high energy density and excellent cyclability for flexible energy-storage devices.
