

Who is Aires renewables?

We know the industry, the market and the region. AIRES Renewables (Registered Trademark), is a company incorporated under Argentinean law providing consulting services for the development and engineering of renewable energy projects and creating investment opportunities in the Latin American energy sector.

Who developed AMEA Togo solar?

The plant was developed by AMEA Togo Solar, a subsidiary of AMEA Power- a global renewable energy developer based in the UAE. IRENA remained heavily involved in the project throughout the process, brokering discussions between the Togolese government, ADFD and AMEA Power, and presenting solutions to construction and financing challenges.

Why does Togo rely on wind and photovoltaics?

Additionally, wind and photovoltaics (PV) contributed significantly to the security of supply, as demand could not have been met by domestic conventional and nuclear generation capacities of up to 424 h in 2018. Togo, like many sub-Saharan African countries that do not produce oil, depends mostly on imports for its electricity supply.

How much power does Togo produce a year?

Currently, Togo has 230 MW installed generating capacity that produces 1,600 GWh of power annually, of which, 65 MW of Nangbeto hydroelectric power is operated by the Benin Electricity Community (CEB, a jointly operated public entity between Togo and Benin in charge of generation) installation in Lomé.

How much will Togo spend on electrification?

This is approximately \$142 million per year, which will be four times more than the normal average government input in the electrification development per year (AT2ER 2019). Togo's ambition is to deploy more than 300 mini-grids by 2030.

Does Togo have a competitive electricity market?

The electricity company of Togo remains the sole entity that can market the electricity generated and there is no competition in electricity markets that will create more competitive markets and reduce the price per unit.
