

How much of Panama's energy is renewable?

The goal laid out in Panama's National Energy Plan aims to generate 70% of its energy from renewable sources by 2050. Panama produces 54% of its energy through hydropower. An isthmus of land situated between the Atlantic and Pacific oceans, Panama has many naturally flowing sources of water.

What is energy poverty in Panama?

Energy poverty occurs when a household does not receive enough electricity to power the home. Symptoms of energy poverty include negative health impacts as a result of extreme temperatures, stress and exorbitant energy bills. Panama has great potential to develop its renewable energy capacity in hydropower, solar, wind and more.

Is hydropower a problem in Panama?

A study found that heavy reliance on hydropower is linked to corruption in some nations. To address these problems, Panama may be able to opt for small-scale hydropower designs that do not require big reservoirs yet still produce enough energy.
