

What is Angola's energy mix?

Angola's current installed capacity is estimated at 5.7 GW but only 70 percent is in use. The country's current energy mix consists of 61.8 percent hydropower, 37.6 percent other fossil fuels and 0.6 percent hybrid (solar/fossil fuel).

How is Angola addressing its energy deficit?

IMPORTANT STEPS: Angola has in recent times taken important steps together with partners such as the African Development Bank to address its energy deficit and increase access to energy by the country's population (it is estimated that only 40% of the population has access to electricity).

Will Angola achieve a 60 percent electrification rate by 2025?

To achieve a targeted 8.9 GW of installed generation capacity and a 60 percent electrification rate by 2025, the government has instituted an ambitious infrastructure plan. Angola's current installed capacity is estimated at 5.7 GW but only 70 percent is in use.

How much power does Angola need?

In order to ensure a safe power supply, even in years of lower hydro flow, Angola should have 9.9 GW of installed capacity - through increasing power capacity in all sub-systems and through a strong reliance on hydro and gas (which will correspond, respectively, to 66% and 19% of installed power capacity).

Who will build a 50 MW solar power plant in Angola?

The Italian company ENI signed a concession agreement with the government for the construction of a 50 MW solar plant in Namibe province, in southwestern Angola. The solar power plant will be constructed by Solenova, a joint venture between ENI and Angolan state-owned oil producer Sonangol.

Does Angola use natural gas to generate electricity?

Since then, the Soyo power plant in the north of the country has already started using Angolan produced natural gas to generate electricity.
