

optional Steuerbarer Wechselrichter in Home Assistant z.B. durch OpenDTU oder andere -> Ausgabe in Watt (Geht auch der Anker WR) optional Akkuspeicher der steuerbar ist in Home Assistant (z.B. Anker Solix E1600) -> Ausgabe in Watt; ...

First of all, I'm not sure if I'm translating this correct. In further I call it SolarPower which means (in my world) energy that is going to the electric grid from my solarsystem. I'm kinda new to HomeAssistant and I managed to add my SolarEdge Inverter and the electric meter via Modbus TCP into my HomeAssistant. Needs some time to track data, but on a first look every ...

Hi everybody. I'm looking to automate the production of hot water with solar panels, and use the excess to support the UFH. I've installed shelly temp sensors in solar panel, and hot water tank, and shelly actuator to turn the pump on, I also have a three way valve that will divert the solar circulation to UFH tank when the water for bathing temp is enough. all sensors ...

I found a solution that works for me. I created a custom my_sun sensor based on elevation and rising from the sun integration. 28 is based on the time at which our solar panels at our gps coordinates potentially deliver 2000watts about 9am in the morning thrown into a solar calculator and the same with 45 but delivers potentially less than 2000watts in the evening.

Like many others I want to charge the Tesla based on available solar energy controlled by Home Assistant. What is good integration or what is a good automation script for this. My situation: Home Assistant installed and up and running, Tesla integration installed and working perfectly, Goodwe integration for solar power monitoring, working ...

Hi, I have a Solar PV system. Every unit I export to the grid I am paid a pittance and every unit I import from the grid is pretty expensive. What I would like to do is set home assistant to lower the temp on my 2 AC units down to the lowest whilst only using the power I generate as much as possible. The AC and the solar system are both already integrated into ...

A few minutes later the grid demand is back down, as the automation turned off cooling. So, on sunny days the automation is more effective. On cloudy days, the automation prevents large demand charges from my utility. As the temperature rises during the summer, I have another automation to pre-cool the home prior to 14:00.

The handiest automation I have is one that switches on my geyser if my battery is fully charged. I use Home Assistant as the timer for my geyser - switch on every day at 15:00 for 3 hours - but also to switch it on when the battery is at 100% to avoid sending power to the grid (I can't sell power back to the grid).

I hear many people use Solar Assistant in combination with Home Assistant. Why have Solar Assistant in the middle if the data can be sent straight to Home Assistant with a much more customizable experience? My best guess is the ease of setup, support for many inverters / BMS, and remote inverter configuration.

Hi everyone! I am just starting my journey with Home Assistant and have some ideas that might or might not be feasible. Any Input is much appreciated! What is my Plan? Well, we have ordered a Heat Pump for our house (Vaillant Arotherm Plus 55 with SensoComfort 720 Controller) and also a Solar array (7.7KWp with a Huawei Sun2000 Inverter and Huawei ...

Home Assistant Automation Overview. Although the automations may look complicated, they are built piece by piece with three simple stages called Triggers, Conditions, and Actions. ... (via Solar Assistant's ...

Click Here to directly add a Solcast Solar integration or a. In Home Assistant, go to Settings -> Integrations
b. Click + Add Integrations and select Solcast PV Forecast; Enter you Solcast API Key; Click Submit; Create your own automation to call the service solcast_solar.update_forecasts when you like it to call. Change the configuration options for an existing Solcast PV Forecast ...

I'm very happy with my setup using Solar Assistant for effortless communication with my newly installed Deye 8kw Inverter with my pre-existing Home Assistant Setup.. I bought the preinstalled Pi from Solar Assistant with a cable and a DC power supply, and got it running within 10m, with another 30m to get the MQTT integration working following the Solar ...

Optimiere deinen Solarstrom mit Alklys Automation für Home Assistant: Eine smarte Lösung, die deine Geräte automatisch steuert, basierend auf deinem Solarstromertrag. Einfache Einrichtung ohne Programmierkenntnisse, mit Benachrichtigungen auf dein Handy und vollständig lokal für maximale Sicherheit und Datenschutz. Ideal für Haushaltsgeräte wie Wasch- und ...

Click Here to directly add a Solcast Solar integration or a. In Home Assistant, go to Settings -> Integrations
b. Click + Add Integrations and select Solcast PV Forecast; Enter you Solcast API Key; Click Submit; Create your own ...

Home Assistant (<https://>) Integration component.This custom component integrates the Solcast PV Forecast for hobbyists into Home Assistant. It allows forecast visualisation in the Energy dashboard, and supports flexible forecast dampening, the application of a hard limit for over-sized PV systems, a comprehensive set of sensor and configuration ...
