

The application of phase change materials (PCMs) in prefabricated buildings plays an important role in green building energy savings. In this paper, the wall with a phase ...

These findings provide a theoretical foundation and practical guidelines for the application of SAP phase change insulation materials in the building industry, ... An innovative SAP phase change ...

The configuration of the solar greenhouse building wall and the thermal properties of the building materials directly impact wall insulation, heat storage characteristics, ...

Ceviz et al. (2023) studied the energy storage characteristics of phase change materials in horizontal double-layer glass. Therefore, the application of phase change energy storage materials in the building envelope ...

The global energy transition requires new technologies for efficiently managing and storing renewable energy. In the early 20th century, Stanford Olshansky discovered the phase change storage properties of ...

Phase Change Materials for Energy Storage Devices. ... while during the heat discharging process, the PCM wall releases more heat energy. ... Reducing heat transfer across the ...

Phase change material (PCM)-based thermal energy storage significantly affects emerging applications, with recent advancements in enhancing heat capacity and cooling power. This perspective by Yang et al. ...

Energy Storage is a new journal for innovative energy storage research, ... A Trombe wall is a classical passive solar heating system used in buildings. Increasing the weights and volumes of Trombe walls can increase their heat ...

This work presents a comprehensive review on the different advantages of integrating PCMs with Trombe walls. The article shows that the satisfactory heat storage capacity of PCMs can improve indoor air thermal circulation and ...
