

Who is Aquion Energy?

Aquion Energy was a Bethlehem, Pennsylvania and Washington, D.C. -based company that manufactured sodium ion batteries (salt water batteries) and electricity storage systems.

What happened to Aquion Energy?

In March 2017, Aquion Energy filed for voluntary bankruptcy under Chapter 11. In June 2017, bidding starting with a stalking horse offer of \$2.8 million from an Austrian battery firm, BlueSky Energy.

When did Aquion Energy become a chemistry?

Aquion Energy was spun out from CMU in late 2009 after the first-generation version of the AHI chemistry was developed in the labs at CMU in 2008 by Dr. Whitacre, who graduated from Oberlin College in 1994 with a BA in Physics.

When did Aquion Energy go bankrupt?

In March 2014, they announced that commercial shipments of batteries would begin in mid-2014, and in May 2014 announced they had shipped 100 units. In March 2017, Aquion Energy filed for Chapter 11 bankruptcy, citing the inability to obtain additional funding.

When did Aquion Energy start production?

Under the leadership of CEO Scott Pearson, Aquion began low volume production in the summer of 2011 and broke ground on a full-scale manufacturing facility in nearby Westmoreland, PA in 2012.

Aquion's UK evangelists. Energy Storage News has covered several Aquion installations globally since 2014. The first in the UK was a 25kWh commercial, on-grid system on farmland in Northern Ireland, with Solar PV Partners the supplier of the battery and Wattstor as installer. Installed in just a day and a half, at the time Wattstor director ...

In terms of energy, this is equivalent to $50\text{Ah} \times 12\text{V} = 600\text{Wh}$. 600Wh will be your available energy, but bear in mind that it has to go through the inverter (DC to AC), which has an efficiency of 90%. In the end, your total useful energy will be ...

APB-ENERGY, distributeur AQUION France & Afrique APB-ENERGY est en charge de la distribution des batteries AQUION sur la France, les DOM/TOM et la plupart des pays d'Afrique. Ces batteries ne sont pas vendues en direct aux particuliers, mais uniquement aux professionnels et installateurs afin de garantir une parfaite mise en oeuvre.

Aquion drew early attention for developing a relatively inexpensive battery for grids and microgrids, promising to make it cheaper and easier to integrate renewable energy sources like wind and...

Best Solar Generators at a Glance. Best Overall Solar Generator - Renogy Phoenix Portable Generator Best Solar Generator for Camping - Goal Zero Yeti 400 Lithium Portable Power Station Best Portable Solar Generator - Jackery Explorer 1000 Best Solar Generator for Home - Goal Zero Yeti 1,400 Best for RV Use - EcoFlow DELTA Best for Festivals - Point Zero Energy Titan

Contact Aquion Energy support for assistance. Homeowners All technical and field support for Aquion batteries is provided by the installer or distributor who installed the system. Contact your installer for all inquiries and support. Businesses and Utility Customers Please review the operations manual for your products - almost all questions should already be answered in...

Invinity Energy Systems is a relatively recent company that was the result of a merger between two battery companies, RedT Energy and Avalon Battery. The two companies combined to take advantage of their different specialties to form a stronger company that could handle both research and development and international distribution.

OverviewHistoryTechnologyProductionSee alsoExternal linksAquion Energy was a Bethlehem, Pennsylvania and Washington, D.C.-based company that manufactured sodium ion batteries (salt water batteries) and electricity storage systems. The company claimed to provide a low-cost way to store large amounts of energy (e.g. for an electricity grid) through thousands of battery cycles, and a non-toxic end product made from widely available material inputs and which operates safely and reliably across a wide range of te...

Follow our press releases for the latest goings on with Aquion Energy and the energy industry in general. There is always something new going on. Technical support. Contact your installer for all inquiries and support. All technical support, field support, and product documentation will be provided by the dealer or distributor who installed ...

In terms of energy, this is equivalent to $50\text{Ah} \times 12\text{V} = 600\text{Wh}$. 600Wh will be your available energy, but bear in mind that it has to go through the inverter (DC to AC), which has an efficiency of 90%. In the end, your total useful energy will be 540 Wh ($600\text{Wh} \times 0.9$) for 10 hours, equivalent to 54W continuously for 10 hours.

The nuclear accident of Fukushima in 2011 marked a stop in the growth of the nuclear energy industry. It has now been 10 years, and the sector is still recovering, with energy production below 2011 levels.. However, producing electricity from nuclear fission offers several advantages - there is no CO 2 emission, and it is an abundant and reliable electricity source.

Aquion Energy is fundamentally­­ changing the economics of power generation, transmission and distribution by developing and commercializing cost-effective energy storage solutions that are safe, reliable, and sustainable from nontoxic components as simple as saltwater. Based on the research of Carnegie Mellon University Professor Jay Whitacre,

Clean energy should be stored in clean batteries. Aquion's Aspen batteries are optimized for long duration daily deep cycling. Possible applications includes microgrids, Commercial & Industrial, telecom, Green Architecture, Lighting, ...

The deep-cycle battery is an excellent and reliable energy source for all types of devices, even powering off-grid homes that require high-capacity battery banks to supply their energy needs. The high-level efficiency and longer life span of deep-cycle batteries allowed them to become the top choice on the market for many devices and equipment ...

As the world pivots towards sustainability, renewable energy systems such as solar panels, wind turbines, and hydroelectric power plants have become critical assets in the fight against climate change. However, harnessing these green power sources efficiently requires sophisticated monitoring and management techniques. Enter the realm of data acquisition (DAQ) - a ...
