

Can reclaimed asphalt pavement reduce energy consumption?

An alternative to decrease energy consumption is the use of waste materials in infrastructure construction and rehabilitation. When an asphalt pavement reaches the end of its design life, the road surfacing is milled, creating a milling waste material known as reclaimed asphalt pavement.

Can spent asphalt be used as a raw material for mesoporous carbon?

Spent asphalt is used as a raw material to produce mesoporous carbon. The product has interconnecting pores, high surface area, and crystal defects. The product exhibits appealing electrochemical properties in Li/Na/K-ion batteries. The study is promising for waste reclamation of spent asphalt.

Does hot mix asphalt save energy?

Moreover, the energy consumption of the pavements structures was evaluated. Pavements composed of Portland cement concrete consume more energy than hot mix asphalt. But, warm mix asphalt technologies can save 20-70% of the energy consumption when compared to hot mix asphalt, mainly due to the temperature reduction in the warm mix processes.

Can petroleum asphalt be used in electrochemical energy storage?

In view of the application of petroleum asphalt in the field of electrochemical energy storage, this review focuses on the research progress of the preparation and modification of petroleum asphalt-based nano carbon materials and their applications in the electrode materials of secondary battery and supercapacitor.

How to reduce energy consumption during asphalt mix production?

energy consumption during asphalt mix production. For this analysis, four specific practices were considered: increasing the percentage of natural gas consumed as a burner fuel, decreasing the aggregate moisture content, utilizing WMA technologies to reduce mix production temperature, and reducing the intensity of electricit

How much energy does an asphalt plant use?

In order to assess the asphalt plant efficiency, energy consumption from seven typical Swiss plants was analysed. For hot mix asphalt plants, the energy consumption ranged from 84 kWh/t to 118 kWh/t; the average energy consumption was 99 kWh/t (356 MJ/t). For warm mix asphalt, the average energy consumption was 63 kWh/t (226 MJ/t).

Therefore, if you want to save energy consumption, then workers must appropriately control the moisture content of raw materials, and can take some measures to optimize the quality of raw ...

Today, asphalt is one of the most recycled materials. Reclaimed asphalt pavement, derived from reconstruction or resurfacing of existing roads, is reused in new asphalt mixtures. Cold ...

Warm mix asphalt (WMA) is a promising alternative as it saves energy, reduces fuel consumption and generates fewer gas and fume emissions, while maintaining a similar performance to hot mix asphalt (HMA).

This research aims to explore the feasibility of utilizing thermoelectric technology with asphalt pavement materials as a renewable energy source in the future. The study also ...

In view of the application of petroleum asphalt in the field of electrochemical energy storage, this review focuses on the research progress of the preparation and modification of petroleum ...

Star Energy currently has 6 asphalt warehousing bases under construction or preparation, with a total capacity of 350,000 tons, and 7 asphalt modification plants, and has established a national-level asphalt R& D laboratory. ... as well ...

Increased production required more raw material inputs; as a result, Newlay Asphalts invested in Opus to create a dry environment that reduces moisture in their recycled asphalt pavement (RAP). ... As energy costs rise, storage that ...

Download Citation | On Aug 1, 2023, Feng Ma and others published Microencapsulated binary eutectic phase change materials with high energy storage capabilities for asphalt binders | ...

The decrease in energy consumptions and GHG emissions, life cycle extension, and better serviceability can be achieved by the exploitation of waste materials, such as reclaimed asphalt pavement (RAP), reclaimed asphalt shingles ...

Obviously, the types of raw materials and their stoichiometric ratio are vital to obtain a PU suitable for asphalt pavement utilizations. As for raw materials, PEG with its ...
