

Several studies have already dealt with utility business models [e.g. 4, 10, 20] and business model innovation [1]. However, the reasons for business model changes in the Austrian electricity sector remain relatively ...

Gusshausstraße 25-29 / 370-3, A-1040 Vienna, Austria . European Renewable Energies Federation (EREF) Avenue Marnix 28, B-1000 Brussels, Belgium . ... Renewable Energy and Energy Efficiency targets consistent with a 55% GHG reduction in 2030. The Green Deal and Fit for 55 : Delivering on increased Climate Ambition.

Several studies have already dealt with utility business models [e.g. 4, 10, 20] and business model innovation [1]. However, the reasons for business model changes in the Austrian electricity sector remain relatively unexplored and, to the best of the author's knowledge, no study has yet dealt specifically with business model changes in the electricity sector with ...

China is set to cement its position as the global renewables leader, accounting for 60% of the expansion in global capacity to 2030. The country is forecast to be home to every other megawatt of all renewable energy capacity installed ...

The two existing 220 kV lines from St. Peter to Bavaria were built in the 1940s and 1960s and their capacity is not enough to meet the growing renewable energy needs in the course of the energy transition. In addition, the ...

Renewable energy sources are changing the paradigms of energy policy, regulation and market design. By now, all electricity-related initiatives, including supply, transmission, delivery and consumption, are directly or indirectly influenced by the expansion and integration of ...

Transportation is at a turning point. On the horizon lies a future where affordable and abundant renewable electricity can be used to power cost-competitive battery electric vehicles (EVs) and produce energy-dense low-carbon fuels enabling to fully decarbonize transportation systems across all modes.

The deployment of renewable energy sources is a major lever to decarbonize the power sector and mitigate the effects of climate change [1] the last decades, there has been unprecedented growth in two technologies in particular--solar photovoltaics (PV) and wind power--with respective global shares of 4% and 7% in installed capacity and average annual ...

Integration of Renewable Energy into Present and Future Energy Systems Coordinating Lead Authors: Ralph Sims (New Zealand), Pedro Mercado (Argentina), Wolfram Krewitt +(Germany) Lead Authors: ... Morgan Bazilian (Austria/USA), Milou ...

Illustrated by careful analysis of selected examples of renewable integration using different types of grid flexibility, this volume is indispensable to readers who make policy recommendations to establish the distributed energy network integrated ...

Renewable energy is the most promising solution to deal with the growing problem of greenhouse gas emissions, and it also to protect the environment. Renewable energy is used by several countries to produce new-generation technology [1]. The usage of renewable energy such as solar, biomass, hydro, and wind vary by country [2]. The incorporation ...

China is set to cement its position as the global renewables leader, accounting for 60% of the expansion in global capacity to 2030. The country is forecast to be home to every other megawatt of all renewable energy capacity installed worldwide in 2030, after surpassing its end-of-the-decade 1 200 GW target for solar PV and wind six years early.

National Renewable Energy Lab. (NREL), Golden, CO (United States) Sponsoring Organization: USDOE Office of Energy Efficiency and Renewable Energy (EERE) DOE Contract Number: AC36-08GO28308 OSTI ID: 1215177 Report Number(s): NREL/TP-6A20-63919 Country of Publication: United States Language: English

This paper elaborates on the costs and benefits of expanding the Austrian transmission system and the implementation of innovative grid-impacting technologies (e.g. flexible AC transmission systems (FACTS), dynamic line rating (DLR)) to support further integration of renewable energy sources for electricity generation (RES-E).

GE Renewable Energy to provide one 45 MW horizontal generator ; From 2023, the new pumped hydro storage power plant will support the integration of wind and photovoltaic systems in Austria ; Following Malta Oberstufe, Reisseck II is VERBUND's second fully-fed variable speed pumped hydro storage power plant in Austria equipped by GE Hydro;

This paper elaborates on the costs and benefits of expanding the Austrian transmission system and the implementation of innovative grid-impacting technologies (e.g. flexible AC transmission systems (FACTS), dynamic line rating (DLR)) to support further integration of renewable energy sources for electricity generation (RES-E). Therefore, a ...
