According to estimates by the Global Wind Energy Council (GWEC), Japan has offshore wind potential at approximately 128GW for fixed-bottom and 424GW for floating turbines. SeaTwirl's vertical-axis wind turbine design is considered particularly suitable for the Japanese offshore environment.

There are two main types of wind turbines. The two general categories for wind turbines include vertical axis or horizontal axis wind turbines. The turbines are classified upon how the shaft of the generator is mounted. The horizontal axis wind turbine HAWT was invented before the vertical axis wind turbine (VAWT), which led to its popularity and

Which wind turbine? designs are? most efficient for off-grid ?energy production? Vertical-axis wind turbines (VAWTs) and? horizontal-axis ?wind turbines (HAWTs) are both efficient for off-grid energy production. VAWTs are particularly suitable for low wind areas,? while HAWTs are more efficient ?in higher wind areas.
