

Is energy storage a key innovation area in China?

China has issued several policies on energy storage and new energy consumption. In November 2014, China's State Council issued a strategic action plan for energy development (2014-2020), which identified energy storage as one of the key innovation areas.

Which energy storage technology has the most potential?

Energy storage has been a key part of empowering the outstanding transition as it depends more on renewables and less on fossil fuels. Among various ES technologies, BESS follows with the most potential. According to BloombergNEF (BNEF), battery prices have dropped to 87% from the year 2010 to 2019.

Are energy storage systems a good choice?

Thus to account for these intermittencies and to ensure a proper balance between energy generation and demand, energy storage systems (ESSs) are regarded as the most realistic and effective choice, which has great potential to optimise energy management and control energy spillage.
