

Are lithium-ion batteries a viable energy storage solution?

Lithium-ion batteries (LIBs) have become one of the main energy storage solutions in modern society. The application fields and market share of LIBs have increased rapidly and continue to show a steady rising trend. The research on LIB materials has scored tremendous achievements.

What are lithium-ion batteries?

Provided by the Springer Nature SharedIt content-sharing initiative Lithium-ion batteries (LIBs) have attracted significant attention due to their considerable capacity for delivering effective energy storage. As LIBs are t

Are lithium-ion batteries compatible with lithium-metal-based ASSB manufacturing?

The modified materials and cell design compared to the currently predominating lithium-ion batteries (LIBs) entail significant changes in manufacturing, rendering existing industrial battery production lines incompatible with lithium-metal-based ASSB fabrication.

How does decarbonisation impact lithium-ion battery technology?

Growing demand for energy storage linked to decarbonisation is driving innovation in lithium-ion battery (LiB) technology and, at the same time, transforming the organisation of established LiB production networks.

How to improve the production technology of lithium ion batteries?

However, there are still key obstacles that must be overcome in order to further improve the production technology of LIBs, such as reducing production energy consumption and the cost of raw materials, improving energy density, and increasing the lifespan of batteries .
