What is an energy storage system?

An energy storage system is the ability of a system to store energy using the likes of electro-chemical solutions. Solar and wind energy are the top projects the world is embarking on as they can meet future energy requirements,but because they are weather-dependent it is necessary to store the energy generated from these sources.

How a remote is connected to a base station?

2. If a remote exists,it is connected to the base station through a telephone linewith 10 dB of loss. 3. The base station drives the line output at 0 dBm with nominal receive deviation. 4. The remote drives the line nominally at 10 dBm. The signal arrives at the base station at -10 dBm resulting in nominal transmit deviation.
