

Compared to nickel-coated steel, battery housings made of Speira aluminium are characterised by significantly higher thermal conductivity and lower weight - while at the same time offering ...

In an emergency, however, every second is crucial. It's a good thing that battery housings made of steel remain far below their melting point even in battery fires and protect ...

The battery pack is enclosed by 2 half-housings on all sides; with appropriate design of the connection zone, the thermal bridge effects can also be minimized here; the battery pack is ...

The battery enclosures used in the first wave of EVs to hit the market after 2010 were designed to be sealed firmly shut. This took to an extreme the need to be impenetrable, ...

In this study, a graded lattice design framework is developed based on topology optimisation to effectively tackle the multidisciplinary objectives associated with battery housing.
