

Fuente: CIC energigUNE. La financiación europea, clave para el impulso de estos proyectos. Las perspectivas del potencial del mercado y la necesidad de muchos países de tomar posiciones en esta carrera para afianzar al mercado de la automoción, hace que en los próximos meses se esperen nuevos anuncios y proyectos por parte de distintos agentes, ...

El centro vasco de investigación y desarrollo de soluciones de almacenamiento de energía a CIC energigUNE ha hecho público hoy en su blog el mapamundi (interactivo) de las gigafactorías, las fábricas de baterías para ...

Challenges. The battery industry faces several challenges. One of them would be the search for more accessible and sustainable materials, as dependence on materials such as lithium, cobalt and nickel is very high today, as well as costly and polluting. To address this dependence, sodium batteries (a more abundant and cheaper material than lithium) are being ...

CIC energigUNE collaborates with an extensive network of agents, universities, research centers, companies, platforms, clusters and associations; ... North America takes a stand in the battle for electric car battery gigafactories abr 27, 2021. New materials for stationary energy storage applications abr 21, 2021.

CIC energigUNE, the Basque research center of reference in battery storage, thermal energy solutions and hydrogen technologies, and member of the Basque Research & Technology Alliance-BRTA, will promote ...

At CIC energigUNE, we believe in the power of PEOPLE. We are more than just an organization: we are a community built on values of Energy, Excellence, Leadership, and ...

CIC energigUNE is the research center for electrochemical and thermal energy storage, a strategic initiative of the Basque Government. Come and meet us! Research. Electrochemical Storage. Research groups. ... World map of Gigafactories Blog. ...

The strength of CIC energigUNE lies in having a set of characterization platforms and experts responsible for platforms with great recognition in Europe in each of their fields. Thanks to this, CIC energigUNE is one of the few centers that can obtain a very precise analysis of that "black box"; that for our scientific and business customers are ...

CIC energigUNE ha desarrollado un mapa interactivo que recorre todas las iniciativas de fábricas de baterías del mundo (tanto las ya operativas como las que aún están en fase de desarrollo). Lo ha hecho con la ...

Of course, this growth also has an impact in economic terms. Although there is no unanimity, various sources dare to quantify the market value of this technology at over 1 billion euros in 2030, thanks to compound annual growth rates (CAGR) above 10% until 2030.. Beyond these quantifications, it is still too early, given the emerging state of the technology, to make ...

Join us at CIC energigUNE and make a significant impact in the world of energy innovation! ? <https://lnkd/dN7S9-Hs> Postdoctoral researcher in post-mortem analysis and degradation of lithium ...

June 2020 Gigafactories Update: . 24 Gigafactories for Li-Ion Battery cells announced. More than 600 GWh total annual production capacity (100 GWh more than in June 2020). Enough to equip about 9 million Electric Vehicles per year. Decisions on BYD, CALB, Panasonic and GS Yuasa Gigafactories are still pending. Some recent developments in Q4 ...

CIC energigUNE es el centro de investigaci&#243;n para almacenamiento de energ&#237;a electroqu&#237;mica y t&#233;rmica iniciativa estrat&#233;gica del Gobierno Vasco. &#161;Con&#243;cenos!

About CIC energigUNE; Mission and vision; Organization; Building and Facilities. A set of connected modular buildings that act as the backbone of the center&#180;s activity; Board of members. Basque public and private entities support the center&#180;s activities, helping to guide research of excellence. Collaboration network

? #JoinOurTeam at CIC energigUNE! ? ?Postdoctoral researcher to evaluate the impact of pouch cell assembly parameters between electrode and gel-polymer electrolyte interlayers? We would like to announce an #opening for a #Postdoctoral #Researcher to explore and enhance the technology behind #lithium-ion #batteries.This role is crucial in our ongoing NEXTCELL project and ...

The reason for these moves is clear, especially with regard to the initial stages (such as material extraction or processing): to ensure the entire value chain and its deployment now that the industry is still in an incipient state and with some phases of activity &quot;limited&quot; (such as supply itself, due to the potential shortage of raw materials in the coming years).
