

Can solar power be used in Bolivia?

In the case of the Bolivian remote highlands, off-grid PV-battery systems are often used since the grid is too expensive to expand. High solar radiation in the region, up to 6 kWh/m²/day, provides a practical and economic advantage of using PV technology.

Can solar PV reduce energy poverty in Bolivia?

These efficiency savings can be estimated to about 22%, 14%, and 26% for BPS-1, BPS-2, and BPS-3, respectively. Furthermore, large-scale development of solar PV, particularly in off-grid communities, can serve to reduce energy poverty in Bolivia (Sovacool, 2012).

Should Bolivia use solar energy to generate synthetic fuels?

Using Bolivia's own excellent solar resources to generate synthetic fuels in BPS-1 and BPS-2 would result in energy independence and security. Due to the lack of GHG emission costs in BPS-3, fuel costs remain for the fossil fuels used in the heat and transport sectors. Fig. 23.

Does Bolivia have a long-term energy plan?

As previously mentioned, the Bolivian government does not provide any long-term energy planning study; however, the UNFCCC (2015b) states that RE will compose 81% of electricity generation by 2030. Bolivia's scenario for 2027 according to MHE (2009) states that biomass sources will comprise 8% of total final energy demand.

Will Electric based heating drive the transition in Bolivia?

Heating demand in Bolivia transitions from a system dominated by natural gas and biomass to a largely electrified heating sector. Because of the low cost of renewable electricity, electric based heating will drive the transition for Bolivia's heat sector. Fig. 13.

Can Bolivia have a low-carbon power system?

A sketch of Bolivia's potential low-carbon power system configurations. The case of Applying carbon taxation and lowering financing costs Energy Strateg. Rev., 17 (2017), pp. 27 - 36, 10.1016/j.esr.2017.06.002 J. Clean. Prod., 199 (2018), pp. 687 - 704, 10.1016/j.jclepro.2018.07.159 Technol. Forecast. Soc.

In this study an hourly energy balance modelling of the future Bolivian electricity system was presented. Electricity was supplied by solar PV, wind and existing hydroelectricity, ...
