

What is a shower power booster pump?

The Shower Power Booster Pump augments pressure and flow rates to prevent this occurrence. As previously advised, if your flow rates are exceptionally low and a single pump falls short, upgrading to the Automatic and Manual Pack will provide the necessary boost. The Shower Power Booster Pump can be employed both before and after a Combi boiler.

How many Watts Does a Shower Power Booster use?

The Shower Power Booster requires just 12 watts and uses approximately twenty times less energy of a traditional pump. With a 5*Excellent Rating on Trust Pilot, a 2 or 3 year manufacturer's warranty, and free delivery, the Shower Power Booster is supported by responsive and dedicated customer service.

Do electric showers need a power booster pump?

All electric showers require an incoming cold water pressure exceeding 0.8 Bar, lest the electric shower disengage its heating elements, resulting in either cold or excessively hot water. The Shower Power Booster Pump augments pressure and flow rates to prevent this occurrence.

How does the Shower Power Booster work?

Quiet in operation with a unique and compact design the Shower Power Booster can be installed by a confident DIYer to any shower, tap or hot water system to quickly improve performance. The Shower Power Booster is powered by a safe 12V DC power supply which can be plugged into a conventional 3 pin plug.

Can a shower power booster pump be plugged into a socket?

The pump's power supply can be plugged into any convenient socket (up to 15m away) without requiring an electrician. As the Shower Power Booster pump draws only 15 watts of power, it can also be connected to a standard lighting circuit.

Can a shower booster pump be used on a gravity fed system?

A shower booster pump may only be used on a gravity fed system. This is where the supply to the pump emanates from a header tank (also known as a cistern) often sited in the loft. It is in contravention of Water Byelaws to try and increase the performance (pressure or flow rate) of a system directly fed from the rising main. More specifically...
