

Does Fingrid have a common Nordic market for mfrf capacity?

In addition, a common Nordic market for mFRR capacity is planned. Fingrid procures balancing capacity from the balancing capacity market to ensure that there is enough Frequency Restoration Reserves to maintain the power balance between production and consumption and to ensure the reliability of the transmission network.

How will Fingrid change the balancing capacity market?

Fingrid has also proposed to reduce the minimum bid size of the balancing capacity market from five megawatts to one megawatt. The change in the terms and conditions is still awaiting approval from the Energy Authority, and it will be implemented one month after the approval, i.e. already before the renewal of the market design.

How does Fingrid use reserve markets?

To balance these deviations, Fingrid procures different kinds of reserves from reserve markets. Reserves are power plants, consumption resources and energy storages which adjust their electric power according to the need of the power system.

What is the Nordic mfrf capacity market?

Nordic mFRR capacity market under development The Nordic transmission system operators are implementing the joint Nordic mFRR capacity market as part of the Nordic Balancing Model Project. The common market aims to improve the cost-effectiveness of procurement. Cross-border trading of mFRR capacity requires a reserve of transmission capacity.

How does Fingrid balance consumption and production?

The market operators plan and balance their consumption and production in advance, but in practice there are deviations during each hour. To balance these deviations, Fingrid procures different kinds of reserves from reserve markets.

What is the balancing capacity market of manual frequency restoration reserve (mfrf)?

The balancing capacity market of manual Frequency Restoration Reserve (mFRR) is going to change at the end of 2022 from a weekly procurement to an hourly market. Procurement volumes of up-regulation capacity will increase and the procurement of down-regulation capacity will start from the beginning of 2023.
