

Does Botswana have hydro power?

There is no hydro power potential in Botswana. The existing power generation system of Botswana is based on fossil fuels and consists of two coal-fired power plants and two diesel generators. The bulk of electricity produced locally comes from the coal-fired plant Morupule B, with the other coal-fired power plant being Morupule A.

What is the power sector in Botswana?

Revised in September 2020, this map provides a detailed overview of the power sector in Botswana. The locations of power generation facilities that are operating, under construction or planned are shown by type - including liquid fuels, gas and liquid fuels, coal, coal bed methane, hybrid, hydroelectricity and solar (PV).

Why did Botswana build a 600 MW coal power plant?

By then Botswana had planned to build a 600 MW Morupule B coal Power plant to support the existing aged 132MW Morupule A Coal Power plant. The two plants were adequate to meet the national demand. As the SADC region was experiencing power shortage, private sector showed interest in investing on power generation.

Does Botswana have a good electricity supply?

According to Statistics Botswana, local electricity generation and distribution has showed a slight improvement, increasing by 10.2 percent from 807,943 MWh during the fourth quarter of 2022 to 890,655 MWh during the first quarter of 2023. The increase was attributable to the performance improvement of Morupule A and B power stations.

Where does Botswana get its power?

In 2023, BPC agreed to procure up to 600 MW of power generation from a yet-to-be-built coal-fired power station. Additionally, Botswana imports the bulk of its power from South African utility Eskom, and the rest from Nampower (Namibia), Zesco (Zambia), and the Southern African Power Pool (SAPP), to make up for any production shortfalls.

What is the storage capacity of strategic reserves in Botswana?

Botswana's strategic reserves storage is also not yet up to international standard; storage capacity is approximately 18 days compared to the international standard strategic storage capacity of 90 days. Commercial buffer stock stands at less than five days of national consumption compared to the international standard of 14 days cover.
