

Is solar a viable source of electricity in Brazil?

Solar is now Brazil's second-largest source of electricity. Experts say its growth must also reach and respect communities cut off from the grid. Student Brenda Rodrigues da Silva works on the installation of solar panels at F&#225;brica Social, a professional training centre in Bras&#237;lia, Brazil.

Is Brazil a good producer of solar energy?

Just three years ago, Brazil did not feature among the world's top producers of solar energy, but by 2023 it had risen to sixth place in the rankings. The pace of growth has been notable: since 2022, the country has added, on average, roughly one gigawatt of solar capacity every month.

Are solar power plants a problem in north-eastern Brazil?

How many solar power systems will Brazil have in 2024?

Brazil expects to have 1.2 million solar power generation systems in the year 2024. Solar energy has great potential in Brazil, with the country having one of the highest levels of insolation in the world at 4.25 to 6.5 sun hours/day. As of 2019, Brazil generated nearly 45% of its energy, or 83% of its electricity, from renewable sources.

How resilient is Brazil's hydropower?

Although hydropower itself has felt impacts from extreme weather, with the country resorting to the use of thermoelectric plants during periods of severe drought, Brazil's hydro-dominated electricity mix is nevertheless resilient enough to accommodate the variable nature of solar and wind power, says Pereira.

How much solar power does Brazil have?

The total installed solar power in Brazil was estimated at 41.1 GW at April 2024, which consists of about 18.0% of the country's electricity matrix. In 2022, Brazil was the 8th country in the world in terms of installed solar power capacity (24.079 GW).
