

Are there conflicts of interest in energy storage technologies?

The extensive review offered in this study will serve as a resource for researchers seeking to create new energy storage technologies while overcoming the constraints of existing systems and their applications in power systems. The authors declare that there are no conflicts of interest.

How important is sizing and placement of energy storage systems?

The sizing and placement of energy storage systems (ESS) are critical factors in improving grid stability and power system performance. Numerous scholarly articles highlight the importance of the ideal ESS placement and sizing for various power grid applications, such as microgrids, distribution networks, generating, and transmission [167,168].

Is energy storage a hot research field?

The number of papers with the theme "Energy storage" over the past 20 years (2002-2022) is shown in Fig. 2 and it is deduced from it that ESS is a hot research field with extensive attention (see Fig. 3). Fig. 2.

Which energy storage system is suitable for centered energy storage?

Besides, CAES is appropriate for larger scale of energy storage applications than FES. The CAES and PHES are suitable for centered energy storage due to their high energy storage capacity. The battery and hydrogen energy storage systems are perfect for distributed energy storage.

Which energy storage technique is suitable for small scale energy storage application?

General technical specifications of energy storage techniques [1,10,186,187]. From Tables 14 and it is apparent that the SC and SMES are convenient for small scale energy storage application. Besides, CAES is appropriate for larger scale of energy storage applications than FES.

Are energy storage systems a good choice?

Thus to account for these intermittencies and to ensure a proper balance between energy generation and demand, energy storage systems (ESSs) are regarded as the most realistic and effective choice, which has great potential to optimise energy management and control energy spillage.
