What is a high voltage relay?

High voltage relays are used in many technical devices that require voltages that go up to 10,000 V and currents up to 30 A. Unlike conventional relays, high voltage relay coils are located outside the vacuum and further away from the contacts. High voltage relays offer low and stable contact resistance over the part life cycle.

How do you mount a high voltage relay?

High voltage relays can be mounted in a variety of ways, including: bracket (or flange), DIN rail, panel mount, PCB, and socket. This application note deals with problems related to the methods used in deenergizing electromagnetic relay coils, particularly when a solid state switch is used, and how they affect relay life.
