How do I choose a water system for a food truck?

The first thing to consider is where the water comes from. There are many different options available to food trucks, including water tanks, rainwater collection systems, and even reverse osmosis systems. Rainwater collection systems are probably the most common option for food trucks, but they require a lot of maintenance and upkeep.

Do food trucks need water tanks?

Rainwater collection systems are probably the most common option for food trucks, but they require a lot of maintenance and upkeep. Water tanks on the other hand are great because they are easy to install and maintain, but they do have some drawbacks.

Can you transport a water heater in a car?

Most likely you are trying to transport the water heater in a trunk of an SUV/car. For larger water heaters it might be necessary to fold down the back seats to make the water heater fit into the car. The seats on most SUVs don't fold completely flat (if yours do, then you don't have to employ the following steps).
