

The Paris Agreement's central goal is to limit the increase in global average temperature to well below 2 °C above the preindustrial levels and to pursue efforts to limit it to ...

One perspective posits that digitalization has the potential to enhance energy efficiency, leading to less carbon emissions (Chiarini, 2021). However, an opposing viewpoint suggests that ...

Hitachi ABB Power Grids today announced the launch of SVC Light 174; Enhanced at CIGRE 2021 - its next-generation grid stabilization solution. SVC Light Enhanced enables the smooth ...

The carbon-neutral energy system requires us to connect all the dots, including: local and remote clean energy sources; diurnal and seasonal energy storage; more electrified mobility and ...

A carbon-neutral energy system is based mainly on fluctuating renewable energies like wind and solar power. In order to meet the hourly demand, flexibility options are ...

With a promising carbon neutrality movement is emerging globally, the energy industry is bound to transform towards digitalization and low carbonization to achieve carbon neutrality. "Zero Carbon Network has become ...
