

In order to limit global warming to 2 °C, countries have adopted carbon capture and storage (CCS) technologies to reduce greenhouse gas emission. However, it is currently ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel-based power generation with power ...

It is also discussed how the results can facilitate developing energy transition policies regarding carbon price and geothermal technologies. Our findings reveal the feasibility ...

The global GHG, including CO₂, emissions are still rising year by year, especially for fuels and industrial emissions. Achieving carbon emissions neutrality is a goal for many ...

With global climate change looming large, there is an urgent need for China's energy sector to take steps towards carbon neutrality. This study aims to explore how digital ...

The number of countries announcing pledges to achieve net zero emissions over the coming decades continues to grow. But the pledges by governments to date - even if fully achieved - fall well short of what is ...

4.1. Strategic measures for world energy transition 4.1.1. Renew energy concept and develop "Energy Science" and "Carbon Neutral Science"; The renewal and transformation of energy ...

Ge et al. Carbon Neutrality Page 4 of 32 the generation of renewable electricity. In this review, a major objective is to provide a guide for the development of integrated concepts based on ...
