Cement-based battery is a new area of research that is gaining popularity with the evolving idea of developing multifunctional and smart building solutions. This is deemed as a concept stirring revolution, because of the ability of the buildings to store energy and then power certain electronic applications. The core principle behind the development of cement-based ...

Imagine our concrete buildings with walls and foundations that double as energy storage devices. Sounds intriguing? Researchers at MIT Cambridge are working on a new pathway for making "supercapacitors" out of ...

A rechargeable cement-based battery was developed, with an average energy density of 7 Wh/m² (or 0.8 Wh/L) during six charge/discharge cycles. Iron (Fe) and zinc (Zn) were selected as anodes, and nickel-based (Ni) oxides as cathodes. The conductivity of cement-based electrolytes was modified by adding short carbon fibers (CF). The cement-based electrodes ...

Handcrafted with lush sprigs of faux Norfolk Island Pine, our splendid 68-inch holiday garland is festively pre-strung with warm-white LED bulbs. ... This long battery-operated decoration lights up the gorgeous artificial foliage that makes Norfolk Pine an evergreen seasonal favorite.
