

Central African Republic power wall alternative

How much electricity would Africa generate if all proposed plants were implemented?

If all proposed plants were implemented, Africa would generate 1,225 TWh from renewable resources (hydropower, solar power and wind power) 38 (Fig. 3). The International Energy Agency projects for 2040 a continental electricity demand of 1,614 TWh (the Stated Policies Scenario) to 2,321 TWh (Africa case) 89.

Can a country build a power system based entirely on renewables?

Population, electricity access and number of existing and proposed renewable power plants determine the potential of a country or jurisdiction to build electricity systems based entirely on renewables, whereas applying an African or world average access rate greatly diminishes the number of capable candidates for such a transition.

How can Africa achieve a pan-African RE transition and reach climate goals?

To facilitate a pan-African RE transition and reach climate goals, more finance needs to be unlocked and energy investments to be doubled to 2030 (ref. 3). To achieve universal electricity access in sub-Saharan Africa, US \$30 billion is needed annually on top of the baseline investment (US \$20 billion, +150%) 85.
