

Can a honeycomb ceramics packed-bed thermal storage tank support a solar air-Brayton cycle?

In this study, design, test and modeling of a honeycomb ceramics packed-bed thermal storage tank for a solar air-Brayton cycle power system are conducted to achieve a required thermal energy storage capacity for the continuous operation of the system when there is no solar radiation.

Can honeycomb ceramic be a high-temperature storage material?

The test results showed a charging-discharging efficiency of 66% proving the feasibility of honeycomb ceramic as high-temperature storage material. Wang et al. experimentally investigated the charging-discharging dynamics of a ceramic honeycomb based storage system.

What is a ceramic-based sensible thermal energy storage system?

In this study, a ceramic-based sensible thermal energy storage system is analysed using analytical and numerical models, and the results subsequently validated with laboratory experiments. Corundum mullite monoliths are used as the storage material which is thermally cycled using compressed air as the heat transfer fluid (HTF).

Can SiC honeycombs be used for thermochemical energy storage?

Composite material using $\text{CaO}/\text{Ca}(\text{OH})_2$ and a Si-SiC ceramic honeycomb for high-temperature (400-600 °C) thermochemical energy storage. Previously, Li et al. used SiC honeycombs with a phase change material for latent heat storage, and demonstrated its enhanced thermal response.

Why do we use ceramic honeycombs as heat exchangers?

By inventing ceramic honey-combs as heat exchangers, the process became much more effective due to a higher life time of ceramic honey-combs (compared to saddles and ceramic balls) and a lower pressure drop of the gas stream. Typically, ceramic honey-comb shapes with 40 channels or

Can ceramic honeycomb blocks be used for high temperature applications?

Srikanth et al. has demonstrated the feasibility of using ceramic honeycomb blocks for high temperature applications. Mullite and chromite based ceramic blocks were thermally cycled between 1073 K and 300 K using air as the heat transfer fluid.

This paper numerically investigates the heat storage in a honeycomb ceramic thermal energy storage in a solar thermal power plant using air as the heat transfer fluid using ...

A new hybrid fuzzy decision-making model is created in this study to evaluate significant factors of renewable energy storage investments and select the appropriate energy types. The factors ...

Thermal energy storage at high temperature is a challenging research area with typical applications like

regenerative heating in steel production plants and auxiliary energy source in solar thermal plants. ... An ...

Characterization and thermal performance of nitrate mixture/SiC ceramic honeycomb composite phase change materials for thermal energy storage, Appl. Therm. Eng., Vol. 81, pp. 193-197. ...

Ceramic Honeycombs for Thermal and Process Engineering. Ceramic honeycomb structures are used in a multitude of applications and due to their technical potential the field of applications ...

Ceramic honeycomb structures have been widely used as heat-transfer media within sensible energy storage systems . Their high heat-transfer surface per unit volume, large heat capacity, and good thermal shock ...

@article{Li2018DynamicSO, title={Dynamic simulations of a honeycomb ceramic thermal energy storage in a solar thermal power plant using air as the heat transfer fluid}, author={Qing Li and ...
