

How important is the tank storage sector in Dutch and European economies?

Important sector of both the Netherlands' and European economies. The European tank storage sector employs 19 000 people and in the next five years will facilitate investments of more than 5 billion euros.⁴ Despite the importance of the tank storage sector in Dutch and European economies

How will battery storage impact the European tank storage sector?

The future development of battery storage in both the transport and electricity sectors holds important implications for the European tank storage sector. As of 2020, there is little battery capacity for grid electricity storage deployed, standing at 17 GW globally.

How can the tank storage sector contribute to climate neutrality?

Europe is leading the energy transition and the war in Ukraine has brought even more urgency to accelerating the path to climate neutrality. The private sector, investors and governments, need to work together to ensure a smooth and accelerated energy transition. Tank storage sector can contribute to this goal.

Why is road transport important to Europe's tank storage sector?

Road transport accounts for almost half of Europe's oil demand.¹² This sector is therefore at the heart of Europe's decarbonization efforts, and its future development is highly important to the European tank storage sector.

Which countries have pumped energy storage capacity?

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

Why are tank storage companies important?

7.2. Technological developments Tank storage companies are part of Europe's energy infrastructure. Important opportunities are arising for them to expand their services, facilities and expertise in order to continue being reliable providers of energy to the European society.

industrial clusters away from Europe and into Asia, and by China's control over entire supply chains for green technologies. The challenges inflicted on the tank storage sector by the ...
