

What is the strategic layout of China's electric vehicle technology development?

Professor Wan Gang, the first leader of the expert group for this project and current Vice Chairman of the National Committee of the Chinese People's Political Consultative Conference, clarified the strategic layout of China's electric vehicle technology development as "Three Verticals and Three Horizontals" for the first time.

Why is the Chinese new energy vehicle industry important?

The Chinese new energy vehicle (NEV) industry has developed rapidly, which has become one of the largest NEV markets in the world. The Chinese government has played a pivotal role in supporting and promoting the NEV industry, leading to significant advancements in policies, technology, infrastructure, industrial chain, and market development.

Will EV storage be reduced by car sharing?

EV storage will not be significantly reduced by car sharing. With the growth of Electric Vehicles (EVs) in China, the mass production of EV batteries will not only drive down the costs of energy storage, but also increase the uptake of EVs. Together, this provides the means by which energy storage can be implemented in a cost-efficient way.

Can EV storage be a cost-efficient energy system?

To realize a future with high VRE penetration, policymakers and planners need knowledge of the role of EV storage in the energy system and how EV storage can be implemented in a cost-efficient way. This paper has investigated the future potential of EV storage and its application pathways in China.

How can energy storage potential of EVs be realized?

2.1. Energy storage potential from EVs In this paper, we argue that the energy storage potential of EVs can be realized through four pathways: Smart Charging (SC), Battery Swap (BS), Vehicle to Grid (V2G) and Repurposing Retired Batteries (RB).

Will eV energy storage be shaped by a single pathway?

The future of EV energy storage should not be shaped by a single pathway. The four pathways are more likely to combine and to offer a composite storage service.
