

Should lithium-ion batteries have a circular economy?

A circular economy for lithium-ion batteries could decrease manufacturing costs, add additional revenue streams, and offer tax benefits. New and expanded markets could also create jobs.

Are lithium-ion batteries a circular product?

In a sense the lithium-ion battery is already very circular as a product. They last for a long time, they are reused and recycled. However the circle looks very different to what policy makers, academics and NGOs often suggest as batteries are being used and reused without control and visibility for our societal institutions and control systems.

Could a circular economy extract more value from battery energy storage systems?

A circular economy would extract more value out of lithium-ion battery energy storage systems, according to Taylor Curtis, project lead and NREL analyst. However, only one U.S. lithium-ion battery recycling facility exists today. The complete findings are published in an NREL technical report.

What is a circular economy for energy materials?

A circular economy for energy materials, such as lithium-ion batteries, reduces waste and preserves resources by designing materials and products with reuse, recycling, and upcycling in mind from the start. Decommissioned lithium-ion batteries are often considered either hazardous or universal waste, which have their own regulations.

What is the life cycle of a lithium-ion battery?

The life cycle of a lithium-ion battery is typically based on a linear model, in which the batteries are made, consumed, and disposed of without much consideration for end-of-life management strategies, including opportunities to reuse or recycle. (Note: The passage does not provide specific information about the length of the life cycle.)

Can lithium batteries be recycled?

In about 2 years, the recycling of lithium batteries which still in 2016 was claimed in Europe to lack economic viability as "only 3% of the material mix in batteries is made of lithium", became profitable and convenient.
