A new type of cement created with nanocarbon black can conduct electricity, allowing it to emit heat and eventually store energy, making concrete more sustainable. The work is led by scientists and engineers at MIT ...

Thermal energy storage (TES) allows the existing mismatch between supply and demand in energy systems to be overcome. Considering temperatures above 150 °C, there ...

“These properties point to the opportunity for employing these structural concrete-like supercapacitors for bulk energy storage in both residential and industrial applications ...

The performance of a 2 × 500 kWh thermal energy storage (TES) technology has been tested at the Masdar Institute Solar Platform (MISP) at temperatures up to 380 °C ...
