

What is an enclosure cooling unit?

Enclosure cooling units are used for cooling down small enclosures and panels where heat generated by electrical devices would otherwise build up. They allow heat to be evacuated from electrical equipment cabinets and are nanoceramic coated for use without a filter in dry, dusty environments. This allows lengthy intervals to be left between cleans.

What are climate controlled cabinets and enclosures?

Climate controlled cabinets and enclosures, as featured in Delvalle Box, have built-in air conditioners, heaters, and thermostats. They are ideal for mounting electrical and electronic equipment both indoors and outdoors. These enclosures are designed to provide protection from rain, sleet, snow, ice, dirt, dust, and debris.

What is the best way to operate a cabinet cooler?

For the best results, use a thermostat control system to operate a cabinet cooler. This method limits compressed air use by operating only when the temperature inside the enclosure approaches critical levels. Continuous Operating Systems are recommended when constant cooling and constant positive pressure inside the panel is required.

What is a cabinet cooler system?

A Cabinet Cooler system is a device designed to maintain a temperature of typically 95F (but adjustable) in harsh, remote environments. It can cool heat loads up to 5600 Btu/Hr and is UL listed to maintain the NEMA integrity of the cabinet.

Our climate controlled cabinets and enclosures feature built-in air conditioners, heaters, and thermostats and are ideal for mounting electrical and electronic equipment both indoors and outdoors. The enclosures are designed to provide ...

The cooling of enclosures and cabinets is a common application in many factories. Often electrical cabinets need to be kept cool in a hot factory to ensure that they continue to operate ...

Delvalle climate control enclosures, provide effective, energy efficient cooling and heating to meet the unique needs of your application. With a full line of filter fans, air conditioners, heat ...

These innovative approaches to cabinet cooling systems provide solutions that are adaptable to virtually all electrical enclosure cooling requirements and ensure enclosure sealing integrity is maintained while keeping electrical equipment at ...
