

Is battery energy storage a new phenomenon?

Against the backdrop of swift and significant cost reductions, the use of battery energy storage in power systems is increasing. Not that energy storage is a new phenomenon: pumped hydro-storage has seen widespread deployment for decades. There is, however, no doubt we are entering a new phase full of potential and opportunities.

Are battery storage Investments economically viable?

It is important to examine the economic viability of battery storage investments. Here the authors introduced the Levelized Cost of Energy Storage metric to estimate the breakeven cost for energy storage and found that behind-the-meter storage installations will be financially advantageous in both Germany and California.

Is battery storage a cost effective energy storage solution?

Cost effective energy storage is arguably the main hurdle to overcoming the generation variability of renewables. Though energy storage can be achieved in a variety of ways, battery storage has the advantage that it can be deployed in a modular and distributed fashion<sup>4</sup>.

How does battery energy storage affect the value of a battery?

The paper found that in both regions, the value of battery energy storage generally declines with increasing storage penetration. "As more and more storage is deployed, the value of additional storage steadily falls," explains Jenkins.

How much does battery storage cost in 2021?

Battery grid storage solutions, which have seen significant growth in deployments in the past decade, have projected 2021 costs for fully installed 100 MW, 10-hour battery systems of: Li-ion LFP (\$356/kWh), Li-ion NMC (\$405/kWh), vanadium RFB (\$385/kWh), and lead-acid (\$409/kWh).

Do projected cost reductions for battery storage vary over time?

The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time. Figure ES-1 shows the suite of projected cost reductions (on a normalized basis) collected from the literature (shown in gray) as well as the low, mid, and high cost projections developed in this work (shown in black).
