

## What is a Sess energy storage business model?

The SESS is a new type of grid-side energy storage business model, which usually refers to the energy storage station located at key nodes of the power grid and serving all power market participants in the region. It has both "shared" and "independent" attributes.

What is the energy storage capacity of Regions A B C & C?

The independent energy storage capacities of regions A,B,and C under Case 2 are 1691.57 kWh,1153.05 kWh,and 328.01 kWh,and the maximum power is 345.30 kW,259.74 kW,and 99.28 kW.

What is the maximum power storage capacity of SESS?

As can be seen from Fig. 3, the SESS is in the charging state from 1:00-8:00, and the power storage rises from 6545 to 19,845 kWh, reaching the upper limit of 0.9 E<sub>ESS,max</sub>, and the maximum charging power is 3000 kW. Besides, the SESS is discharging during 9:00-24:00, and the power storage falls from 19,845 to 4410 kWh.

## What is shared Energy Storage (SES)?

Scientific Reports 14, Article number: 21368 (2024) Cite this article As a new type of energy storage, shared energy storage (SES) can help promote the consumption of renewable energy and reduce the energy cost of users.

### Can SESs and integrated Dr reduce energy cost?

A comparison is made between the configuration of independent energy storage in each region and the configuration of SESS, which concludes that the introduction of the SESS and integrated DR can reduce the energy cost of users and improve the utilization rate of the energy storage facilities.

## How can energy storage services be used in different regions?

The main conclusions are as follows: 1. Users in different regions can obtain charging and discharging services of energy storage by paying service fees to the operators of SESS, which can not only satisfy their energy demand, but also significantly reduce the cost of energy use and enhance the space for sustainable energy consumption.
