

Director, Precourt Institute for Energy, Fortinet Founders Professor, Professor of Materials Science and Engineering, of Photon Science, Senior Fellow at the Woods Institute for the ...

Battery energy storage systems (BESS) with high electrochemical performance are critical for enabling renewable yet intermittent sources of energy such as solar and wind. In recent years,...

Yi Cui, director of Stanford University's Precourt Institute for Energy, won the 2021 Global Energy Prize for new energy applications, one of three Global Energy Prizes given annually. The award cites Cui's "exceptional ...

Energy Storage. Energy storage devices such as lithium ion batteries and supercapacitors are important for portable electronics, vehicle electrification and smart grid. We develop novel nanostructured materials to address critical ...

There is an intensive effort to develop stationary energy storage technologies. Now, Yi Cui and colleagues develop a Mn-H battery that functions with redox couples of ...

Batteries need to be energy-dense as well as safe. Yi Cui and team develop an ultralight polyimide-based current collector with embedded fire retardants that enables lithium ...

Yi Cui, Stanford materials science professor and director of Stanford's Precourt Institute for Energy. (Credit: Feng Pan) ... This triggered global interest in nanotechnology for ...

Yi Cui Group - Stanford University. U.S. Special Presidential Envoy for Climate John Kerry visited the Cui lab on March 8, 2022, to learn about our work on next-generation batteries and green energy technologies. He was given a tour of ...

Energy storage; Materials for energy and catalysis; Abstract. ... Zhenan Bao & Yi Cui. Clean Energy and Transportation Division, Idaho National Laboratory, Idaho Falls, ID, ...
