

Can PEV charging service pricing promote renewable generation adoption?

This article presents a PEV charging service pricing mechanism to help promote renewable generation adoption, which is also a great example of the power-transport synergy. Zhang, H., Hu, Z. & Song, Y. Power and transport nexus: routing electric vehicles to promote renewable power integration. IEEE Trans. Smart Grid 11, 3291-3301 (2020).

What if PEVs and charging infrastructures are fully autonomous?

At stage 4, when PEVs and charging infrastructures are fully autonomous, they will function as mobile storage systems to provide spatiotemporal flexibility to power grids. Supporting infrastructures including charging, information and communication systems are required for sustainable PEV integration.

Can electric vehicle charging and wind power generation be a virtual power plant?

Abbasi, M. H., Taki, M., Rajabi, A., Li, L. & Zhang, J. Coordinated operation of electric vehicle charging and wind power generation as a virtual power plant: a multi-stage risk constrained approach. Appl. Energy 239, 1294-1307 (2019).

Are PEV charging stations pricing strategies for autonomous mobility on-demand systems?

Similarly, a multi-agent deep reinforcement learning algorithm has been developed to study PEV charging stations' pricing strategies for autonomous mobility on-demand systems in cities. Operating and controlling large-scale PEVs to provide grid services or promote renewable generation are difficult.

How do PEVs and charging infrastructures interact with the power grid?

At stage 3, PEVs can discharge to the power grid, allowing higher flexibility to interact with the power grid. At stage 4, when PEVs and charging infrastructures are fully autonomous, they will function as mobile storage systems to provide spatiotemporal flexibility to power grids.

Can electric vehicle batteries satisfy short-term grid storage demand?

Wolinetz, M. et al. Simulating the value of electric-vehicle-grid integration using a behaviourally realistic model. Nat. Energy 3, 132-139 (2018). Xu, C., Behrens, P. & Gasper, P. et al. Electric vehicle batteries alone could satisfy short-term grid storage demand by as early as 2030. Nat. Commun. 14, 119 (2023).

The India Energy Storage Alliance (IESA) is a membership driven alliance on energy storage (includes, electrochemical batteries, mechanical storage, fuel cell e ... The Electric Vehicle ...

Vehicle to Grid Charging. Through V2G, bidirectional charging could be used for demand cost reduction and/or participation in utility demand response programs as part of a grid-efficient interactive building (GEB) strategy. The V2G model ...

Electric vehicles could soon boost renewable energy growth by serving as "energy storage on wheels" -- charging their batteries from the power grid as they do now, as well as reversing the flow to send power back and ...
