

How much solar energy does Cyprus have?

Cyprus is also characterized by an abundant solar energy resource across the whole year: the average global solar can reach 2000 kWh/m². Wind energy is instead quite limited over the island of Cyprus, with an annual average wind speed below 4 m/s in the majority of areas.

Where can I find solar energy in Cyprus?

The solar energy and installation companies can be found in all of the major cities throughout the island, including Nicosia (the capital), Limassol, Larnaca, Famagusta and Paphos. In 2011, the Cypriot target of solar power including both photovoltaics and concentrated solar power was a combined 7% of electricity by 2020.

Will Cyprus become a hub for solar energy innovation?

Georghiou predicts the initiative, coupled with Cypriot industry collaboration, will lead to a substantially higher solar energy deployment in Cyprus over the coming years, reduce environmental degradation and make the country a hub for solar innovation, technology transfer, industry start-ups and job creation.

How does electricity work in Cyprus?

Electricity in Cyprus is managed by the Electricity Authority of Cyprus. Power is primarily generated at three fuel oil-burning stations but the use of distributed renewable energy is expanding. About 97% of the primary energy use was imported in 2008.

How can Cyprus become more energy self-sufficient?

In an attempt to make Cyprus more energy self-sufficient, the EU-funded TwinPV initiative focuses on bolstering the country's technological know-how through the sharing of expertise on the entire solar energy cycle - from cells and modules to storage and smart electricity grids.

What percentage of Cyprus' electricity will come from renewables in 2030?

Based on this analysis, between 25% and 40% of Cyprus' electricity supply can come from renewables in 2030, in the economically optimal mix. Solar PV is the predominant renewable energy technology in all scenarios, supplying between 15% and 27% of the electricity consumed in Cyprus in 2030.

A recent scientific article published in Renewable and Sustainable Energy Reviews in 2014 by Prof. Mete Feridun of University of Greenwich in London and his colleagues investigates the long-run equilibrium relationship among international tourism, energy consumption, and carbon dioxide emissions (CO₂), and the direction of causality among these variables. The authors report evidence that international tourism is a catalyst for energy consumption and for an increase in t...
