

How much energy does Czechia use?

The total production of all electric energy producing facilities is 75 bn kWh, which is 123 percent of the country's own usage. Despite this, Czechia trades energy with foreign countries. Along with pure consumption, the production, imports and exports play an important role. Other energy sources, such as natural gas or crude oil are also used.

How much carbon dioxide does Czech Republic emit per capita?

In 2014, the emissions of carbon dioxide were 10.4 tons per capita. The EU average was 7.9 tons per capita. Czech Republic's emissions were comparable to those of Japan or the Netherlands.

Is Czechia dependent on Russia for its oil supply?

Czechia is dependent on Russia for its oil supply, which is imported through the Druzhba pipeline ("Friendship" pipeline); deliveries were suspended in spring 2019 over oil contamination, affecting crude oil supply (resumption of oil deliveries in July 2019).
