Can predictive maintenance be used to manage energy storage systems?

Part 1 of this 3-part series advocates the use of predictive maintenance of grid-scale operational battery energy storage systems as the next step in safely managing energy storage systems. At times, energy storage development in the electric power industry has preceded the formulation of best practices for safety and operating procedures.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the design, installation, and configuration of battery management systems (BMSs) in stationary applications.

Should the energy storage industry shift to a predictive monitoring and maintenance process?

This article recommends that the energy storage industry shift to a predictive monitoring and maintenance process as the next step in improving BESS safety and operations. Predictive maintenance is already employed in other utility applications such as power plants, wind turbines, and PV systems.

What are energy storage systems?

ENERGY STORAGE SYSTEMS 1.1 Introduction Energy Storage Systems ("ESS") is a group of systems put together that can store and release energy as and when required. It is essential in enabling the energy transition to a more sustainable energy mix by incorporating more renewable energy sources that are intermittent

What is a battery energy storage Handbook?

This handbook outlines the various battery energy storage technologies, their application, and the caveats to consider in their development. It discusses the economic as well financial aspects of battery energy storage system projects, and provides examples from around the world.

How often does Smarter Network Storage get a check-up?

A 2019 Energy Storage News report on operations and maintenance noted that the Smarter Network Storage Project, a 6 MW/10 MWh battery system, receives a 6-month check-up to ensure optimal performance (including identifying battery degradation levels, pushing software upgrades, and inspecting the power conversion system).
