

How does DNF work?

DNF (De Vicente et al. 2016) creates an approximation of the redshift of objects through a nearest-neighbors fit of a hyperplane in color-magnitude space using a reference, or training set, from a large spectroscopic database. DNF also provides a second redshift estimation as the nearest neighbor in the reference sample.

Is dark energy a big deal?

"If it holds up, this is a very big deal," Adam Riess, an astrophysicist at Johns Hopkins University who led the team that discovered dark energy 25 years ago and did not contribute to the recent findings, says to New Scientist's Leah Crane.

Why is dark energy important?

It outweighs everything else in existence, it governs the fate of the Universe and it cannot be explained by known physics. Dark energy is the name physicists use for whatever substance, force or property of space is messing with the Universe, making its expansion accelerate.

Is dark energy evolving?

A new map of the universe hints at the shocking possibility that dark energy is evolving--a suggestion that, if confirmed, would have huge implications for the nature of the cosmos. Dark energy is causing the universe to expand more rapidly over time--and it is considered a constant in the leading model of cosmology.

Is dark energy tearing the universe apart?

Dark energy is tearing the Universe apart. What if the force is weakening? The first set of results from a pioneering cosmic-mapping project hints that the repulsive force known as dark energy has changed over 11 billion years, which would alter ideas about how the Universe has evolved and what its future will be.

What are reconstructed mass maps from Dark Energy Survey Y3 weak gravitational lensing data?

[Link to paper \(arXiv\)](#) [Link to paper \(MNRAS\)](#) We present reconstructed convergence maps, mass maps, from the Dark Energy Survey (DES) third year (Y3) weak gravitational lensing data set. The mass maps are weighted projections of the density field (primarily dark matter) in the foreground of the observed galaxies.
