#### What are the different types of energy storage technologies?

Other similar technologies include the use of excess energy to compress and store air, then release it to turn generator turbines. Alternatively, there are electrochemical technologies, such as vanadium flow batteries.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

#### What is thermal energy storage?

Thermal energy storage is used particularly in buildings and industrial processes. It involves storing excess energy- typically surplus energy from renewable sources, or waste heat - to be used later for heating, cooling or power generation. Liquids - such as water - or solid material - such as sand or rocks - can store thermal energy.

## Why is energy storage important in a decarbonized energy system?

In deeply decarbonized energy systems utilizing high penetrations of variable renewable energy (VRE), energy storage is needed to keep the lights on and the electricity flowing when the sun isn't shining and the wind isn't blowing -- when generation from these VRE resources is low or demand is high.

#### Why is energy storage important?

Energy storage is a potential substitute for,or complement to,almost every aspect of a power system,including generation,transmission,and demand flexibility. Storage should be co-optimized with clean generation,transmission systems,and strategies to reward consumers for making their electricity use more flexible.

## Is storage-capacity a new technology?

Many states are now setting storage-capacity targets, and in 2018 the Federal Energy Regulatory Commission issued Order 841, which integrates stored energy into the wholesale electricity market. "There's been a recognition that this is a technology whose time has come," Jason Burwen, of the American Clean Power Association, told me.
