

Who invests in Stiesdal storage technologies?

The energy and fibre-optic group Andelin invests DKK 75m (EUR 10m) in Stiesdal Storage Technologies. The ambition is to take pumped thermal electricity storage to a new level. The green transition is well under way, and increasingly larger energy volumes are produced from renewable energy sources such as wind and solar.

Can hot stone energy storage help Denmark's green transition?

"The objective is to establish how hot stone energy storage can best help Denmark's and Europe's green transition. The ambition is to have an alternative ready for implementation on wind energy islands and many other locations with the need for storage of renewable energy", says CEO Glenda Napier, Energy Cluster Denmark.

Where is Better Energy deploying its first battery storage project?

Developer Better Energy is deploying its first major battery storage project, a 10MW/12MWh system, at one of its solar PV plants in Denmark.

What is Gridscale - cost-effective large-scale electricity storage?

The full name of the innovation project is 'GridScale - cost-effective large-scale electricity storage', and it will run for three years with a total budget of DKK 35 million (EUR 4.7 million). The project is being funded with DKK 21 million (EUR 2.8 million) from the Energy Technology Development and Demonstration Program (EUDP).

How does energy storage work?

The energy storage reservoir that the partners are working on comprises crushed stones the size of peas stored in insulated steel tanks. When there is excess supply of electricity in the electricity grid, the storage is charged using a specially designed heat pump system which moves heat energy from one set of tanks to another.

What is Stiesdal storage technologies?

Illustration: Claus Rye, Stiesdal Storage Technologies. Pea sized stones heated to 600°C in large, insulated steel tanks are at the heart of a new innovation project aiming to make a breakthrough in the storage of intermittent wind and solar electricity.

This innovation project, entitled "GridScale: A cost-effective, large-scale, electricity-to-electricity storage system", will run for three years on a budget of 35 million ...

An agreement has now been reached between the parties involved in a large-scale CO₂ storage project aimed at securing carbon storage in the North Sea. With the final investment decision, INEOS Energy, Harbour ...

Developer Better Energy is deploying its first battery energy storage system (BESS), a 10MW/12MWh system, at one of its solar PV plants in Denmark. The company is installing the 1.2-hour duration BESS project at its ...

Thermal Energy Storage (TES) is a pivotal technology in advancing sustainable district heating systems. By storing excess thermal energy generated from various sources, TES helps balance energy supply and demand, enhances ...

The energy and fibre-optic group Andel invests DKK 75m (EUR 10m) in Stiesdal Storage Technologies. The ambition is to take pumped thermal electricity storage to a new level. The green transition is well under way, and ...

overview. Battery Energy Storage Solutions: our expertise in power conversion, power management and power quality are your key to a successful project Whether you are investing in Bulk Energy (i.e. Power Balancing, Peak ...

This innovation project, entitled "GridScale: A cost-effective, large-scale, electricity-to-electricity storage system", will run for three years on a budget of 35 million Danish kroner. In addition to Stiesdal and Andel, partners ...
