How long should a gas cylinder be stored?

Longer term storage of gas cylinders (greater than two years) can lead to potential problems or incidents, increase the risks associated with cylinder movement, result in the degradation of cylinder condition, and add to the costs of compressed gas use and cylinder management.

How are CNG cylinders recycled?

Decommissioning: Recycling starts with CNG cylinder decommissioning, which includes safely releasing any residual gas. Disassembly: CNG cylinders are disassembled to separate different components. This includes the cylinder shell, valve systems and other possible materials.

How do I dispose of a gas cylinder?
