

Therefore, the researchers have given careful attention to utilizing different alternative renewable energy sources (RESs), for instance, wind, solar photovoltaic (PV), fuel ...

Due to an ever-increasing rise in proliferation of distributed energy resources (DERs), the paradigm of passive electrical distribution networks is shifting toward active distribution systems. This new environment introduces ...

Elisa's Distributed Energy Storage solution enables a distributed virtual power plant (VPP) solution to be deployed using the Radio Access Network. This is built on an AI/ML software ...

This is causing significant challenges for system operators because these PV resources are nondispatchable and cannot be remotely controlled during switching. Remote control over these resources along with ...
