

Who is Drax Group plc?

Drax Group plc, trading as Drax, is a power generation business. The principal downstream enterprises are based in the UK and include Drax Power Limited, which runs the biomass fuelled Drax power station, near Selby in North Yorkshire. The Group also runs an international biomass supply chain business.

How does Drax support small scale generators?

Drax supports over 2,300 small scale generators, buying renewable power including hydro, wind, solar and anaerobic digestion through Power Purchase Agreements (PPAs). Drax also allows large businesses to create bespoke renewable power contracts with its large hydro generators through Corporate Power Purchase Agreements (CPPAs).

Who uses Drax power?

Drax supplies renewable source power to over 165,000 businesses and organisations across the UK, including electricity from Drax Power Station. We provide and manage electricity for large industrial and commercial sector customers from our offices in Northampton and Ipswich. Opus Energy

Where is Drax based?

The principal downstream enterprises are based in the UK and include Drax Power Limited, which runs the biomass fuelled Drax power station, near Selby in North Yorkshire. The Group also runs an international biomass supply chain business. The company is listed on the London Stock Exchange and is a constituent of the FTSE 250 Index.

Where is Drax Power Station?

Drax power station is an operating power station of at least 2676-megawatts (MW) in Drax, Selby, North Yorkshire, United Kingdom with multiple units, some of which are not currently operating. It is also known as UK Oxy CCS Demonstration Project (White Rose CCS Project). The map below shows the exact location of the power station. Loading map...

Who owns Drax Power Station?

In 1990, the electricity industry of England and Wales was privatised under the Electricity Act 1989. Three generating companies and 12 regional electricity companies were created. As a result of privatisation, Drax Power Station came under the ownership of National Power, one of the newly formed generating companies.

Read our carbon capture, sustainable bioenergy and power generation stories, as well as thinking from Drax's leaders and business updates. ... The prince and the power plant . Larderello, Italy. Italian princes aren't a regular sight in the history books of renewable energy, but at the turn of the last century, on a Tuscan hillside, Piero ...

Drax Power Station has been keeping the lights on for 50 years and could be set to for another 50 with the cutting-edge carbon removal technology: BECCS. Since producing its first watt of power, Drax Power Station has successfully transformed from Western Europe's largest coal-fired power station into the UK's single-largest generator of renewable electricity from sustainable biomass.

The exhibition, Drax Power Station: Powering Britain for 50 Years, celebrates the unique history of the power station, exploring the crucial role it plays in the UK's power system and the positive impact it has made on local communities over the years. The exhibition also looks ahead at plans to make the power station the world's largest ...

Drax, as operator of the UK's largest biomass power station and with plans for new, rapid response open cycle gas turbines (OCGTs), is well placed to be at the forefront of providing reliable, affordable power in the event of a widespread rollout of electric vehicles. The OCGTs in particular, are designed for use in peak times which, in the ...

"Much of Britain's conventional power generators like coal and nuclear stations have retired in recent years," explained Dr Iain Staffell of Imperial College London, and lead author of the quarterly Drax Electric Insights report series. "Fewer dispatchable generators means less competition and higher prices, making cheaper electricity from the continent much more ...

Over the last 15 years Drax has transitioned from a UK-based coal-fired power generator to an international renewable energy company. With the development of carbon removal opportunities utilising BECCS technology, I believe that Drax is at the forefront of the energy transition, and I am excited to be a part of that.

Drax Power Station supplies 6% of the country's electricity needs, including 15% of its renewable power - that's a lot of boiling kettles. To do this, Drax operates on a massive scale. We've got six boilers, each as high as a 15-storey office ...

Read our carbon capture, sustainable bioenergy and power generation stories, as well as thinking from Drax's leaders and business updates. Media Contacts A prosperous future needs energy security and carbon removals - BECCS delivers both >

The 2.6-GW Drax Power Station in northeastern England--once Western Europe's largest coal-fired power plant--is poised to pioneer bioenergy with carbon capture and storage (BECCS), a negative emissions technology. In a move to establish a stronghold on emerging prospects for BECCS, Drax Group has now set out to launch an independent ...

Visit Drax Power Station; Visit Tongland Power Station; Groundbreaking seismic surveys underway for new "Hollow Mountain" power station. Exploratory ground works at the site of what would be the UK's first ...

Drax Group is a renewable energy company engaged in renewable power generation, the production of

sustainable biomass and the sale of renewable electricity to businesses. Drax operates a generation portfolio of sustainable biomass, hydro-electric and pumped hydro storage assets across four sites in England and Scotland.
