

What is a home connected electric vehicle (v2h)?

As a new residential energy resource, the Home-Connected Electric Vehicle (EV) using V2H technology has the potential to discharge energy and serve home consumption. Indeed, V2H has been developed in intelligent homes as a consumer-friendly solution capable of optimizing home energy consumption.

Are electric vehicles a good option for the energy transition?

Our estimates are generally conservative and offer a lower bound of future opportunities. Renewable energy and electric vehicles will be required for the energy transition, but the global electric vehicle battery capacity available for grid storage is not constrained.

Will electric vehicle batteries satisfy grid storage demand by 2030?

Renewable energy and electric vehicles will be required for the energy transition, but the global electric vehicle battery capacity available for grid storage is not constrained. Here the authors find that electric vehicle batteries alone could satisfy short-term grid storage demand by as early as 2030.

How do electric vehicles save money?

Two-way electric vehicles can power a home, send electricity to the grid, and provide back-up power during a power outage or disaster. Bidirectional charging stations can store solar or off-peak energy in electric vehicles to save household electricity costs.

How do EV charging systems work?

When the system identifies a home using electricity from the grid, it sends a signal to the two-way EV charger to discharge it at the same pace, offsetting any power drawn from the grid. When the system detects energy exported from a solar array to the roof, it loads the electric vehicle.

Can EV batteries supply short-term storage facilities?

For higher vehicle utilisation, neglecting battery pack thermal management in the degradation model will generally result in worse battery lifetimes, leading to a conservative estimate of electric vehicle lifetime. As such our modelling suggests a conservative lower bound of the potential for EV batteries to supply short-term storage facilities.
